

# GALVAL

## COLD APPLICATION GALVANIZING COATING

### 7 good reasons for using GALVAL

1. Has a very high **zinc content**, up to 56% of the dry matter for the glossy GALVAL.
2. The glossy GALVAL contains a rust inhibitor mix of zinc flake, zinc powder and aluminium powder.
3. Pre-application **scouring** not necessary for zinc coated surfaces. Exceptional adherence on new metals.
4. Has a very good **salt spray resistance**: 400 hours between 100 and 150°C.
5. Resistant in a **corrosive** environment and a chemical atmosphere.
6. Excellent spraying, **regularity** of the film and **dries quickly**.
7. Reinforces the longevity of the treated surfaces. Good **protection** against industrial atmosphere.

### Particularly suitable for use in:

Industry

Public buildings

Construction

Repair of oxidized galvanized irons.

Galvanization of welding strands and spots on galvanized metal.

Durable galvanic protection of all metal parts of ferrous type: pipes, flanges, connections, frames, posts, rivet heads, crash barriers.

Used in the sectors of metallurgy, boilermaking, bodyworking and boiler rooms.

Characteristics	Instructions for use
Dust dry: 15 minutes Drying time to the touch: around 1 hour Net volume: 500 ml <u>GALVAL glossy:</u> zinc (56% of the dry matter) Temperature resistance: a brief +400°C peak, 250/300°C in continuous <u>GALVAL matt:</u> Contains 55% zinc to 99.5% Temperature resistance: 350 to 400°C in peaks 200 to 250°C in continuous For more information, see MSDS.	Shake aerosol vigorously before use until the agitator ball dislodges. Brush, descale and degrease the surface to protected and then spray on product from a distance of 20 cm. Do not apply to wet surfaces, surfaces previously treated or surfaces with silicone. Apply GALVAL in a cross-coat. After each use, purge the aerosol head by spraying upside down. Do not spray near live electrical appliances. Only for use on equipment which has been switched off. Wait 5 minutes before turning equipment on again.
